

Anatomage[®]

Replica

What is Anatomage Replica?

- High-fidelity physical anatomy models based on Anatomage's real-human-based digital anatomy
- Cadaver-level anatomical detail with detachable components that reveal deeper internal structures
- Offers ethically sourced, hands-on access to real cadaver anatomy

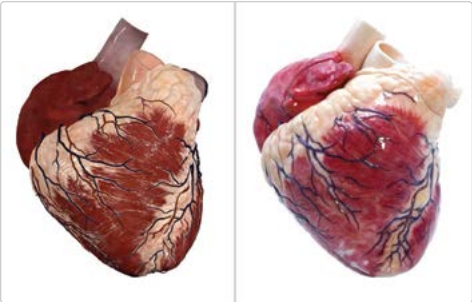

What Makes Anatomage Replica Unique?

- Transforms Anatomage's highly detailed cadaver data into physical models using 3D printing technology
- Exceptional anatomical accuracy that closely replicates the appearance and relationships of human anatomy
- Consistent with bodies available on the Anatomage Table
- Ideal for multi-modal teaching across lectures, labs, and group activities

The Vision Behind Anatomage Replica

Anatomage Replica was created to bring the accuracy and detail of Anatomage's digital human anatomy into the physical world. While cadaver dissection provides an invaluable learning experience, it is inherently destructive and can't serve as a permanent reference. Traditional anatomy models and plastinated specimens can provide physical references, but they come with limitations in realism, durability, cost, and accessibility. Replica offers another way: highly accurate, life-size physical anatomy that bridges digital visualization with hands-on, experiential learning.

Heart

Brain

Hand

Knee

Foot

Key Benefits

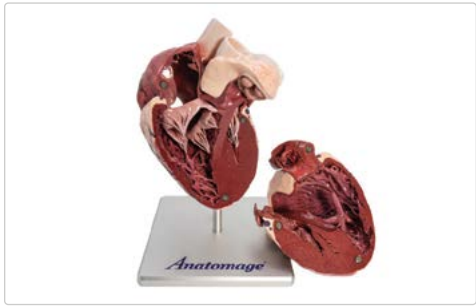

- Strengthens comprehension and engagement with a physical, active learning experience
- Connects digital and physical learning using the same anatomical content
- Ethical, safe to hold, and more economical than plastinated anatomy models
- Expands access to high-quality anatomy education for more students

Applications

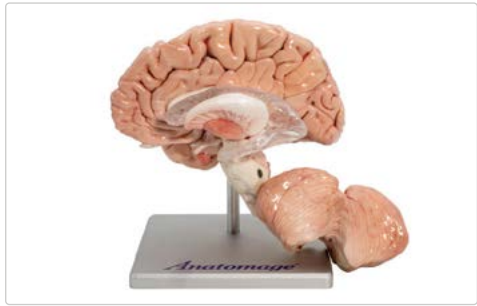

- Hands-on anatomy laboratories
- Small-group learning and discussion
- Classroom demonstrations
- Companion models for the Anatomage Table and other Anatomage technologies

Models Include

Heart (detachable anterior wall)

Brain (detachable cerebellum)

Hand (detachable aponeurosis)

Knee (detachable capsule)

Foot (detachable aponeurosis)
